

E CHANDU REDDY

+91 7386277072 ◇ ◇ chandureddyedala@gmail.com ◇ linkedin.com/in/chandureddy7 ◇ github.com/chandureddy-sec

OBJECTIVE

Cybersecurity professional with hands-on experience in **Vulnerability Assessment & Penetration Testing (VAPT)**, Web Application Security, and Network Security Analysis. Skilled in tools such as Burp Suite, Nmap, SQLMap, Metasploit, and Kali Linux, with strong knowledge of **OWASP Top 10**, threat analysis, and **cyber risk assessments**. Eager to contribute to CyberSRC's cybersecurity consulting practice by delivering high-quality security assessments, penetration tests, and compliance-driven audits.

TECHNICAL SKILLS

VAPT/Pentesting : Web Application Pentesting, Network Pentesting, API Security Testing, Mobile Security Basics, Vulnerability Assessment

Web Security : OWASP Top 10 (2021), Authentication Testing, Session Management, IDOR, XSS, SQLi, SSRF, Broken Access Control

Security Tools : Burp Suite, Nmap, SQLMap, Metasploit, Nessus, Wireshark, OWASP ZAP, Hashcat, John The Ripper

Security Frameworks : PTES (Pentest Execution Standard), OWASP Testing Guide, CVSS, Cyber Risk Reviews

Networking : TCP/IP, OSI Model, Subnetting, VLAN, NAT, DHCP, DNS, Routing, Packet Analysis

Operating Systems : Kali Linux, Windows, Active Directory

Programming : Python (Security Scripting), Bash Scripting

Concepts : HTTP/HTTPS, Cookies, Headers, TLS/SSL, Threat Analysis, Compliance Audits

PRACTICAL EXPERIENCE

Ethical Hacking Hackathon – Supraja Technologies

2025

- Performed hands-on **VAPT** on web applications and network services in a competitive lab environment.
- Intercepted and manipulated HTTP requests using Burp Suite to identify vulnerabilities including price manipulation and broken authentication – documented findings with **risk ratings and remediation steps**.
- Conducted network traffic analysis with Wireshark; identified insecure auth mechanisms and clear-text credential exposure (**security assessment**).

Cyber Security Diploma Training – Crow Security, Hyderabad

Present

- Practicing **VA/PT methodology**: reconnaissance, vulnerability scanning (Nessus, Nmap), exploitation, and report writing aligned to industry standards.
- Gaining practical exposure to Linux administration, shell scripting, network protocols, and **cyber risk management** concepts applicable to compliance-driven assessments.

PROJECTS

Active Directory Attack Lab – Enterprise Network Simulation

- Designed and deployed a misconfigured Active Directory environment (Windows Server DC + Windows client + Kali Linux) to simulate real-world enterprise **network penetration testing**.
- Executed attack scenarios: Kerberoasting, AS-REP Roasting, Pass-the-Hash, DCSync, lateral movement – mapped findings to **CVSS scores** and documented remediation recommendations.
- Used BloodHound for AD enumeration and **cyber risk identification**; achieved full domain compromise via privilege escalation from weak service accounts.

Web Application Penetration Testing Lab – OWASP Top 10 Coverage

- Performed comprehensive **web application security assessments** on DVWA and intentionally vulnerable apps – identified SQLi, XSS, IDOR, Broken Authentication, and SSRF vulnerabilities.
- Intercepted and modified HTTP requests with Burp Suite; validated findings using SQLMap and OWASP ZAP for **vulnerability confirmation and risk review**.
- Produced structured **pentest reports** with impact analysis, CVSS severity ratings, and remediation recommendations following OWASP Testing Guide and PTES methodology.

CERTIFICATIONS

- **Ethical Hacking Training** – Crow Security | **Linux Essentials** – Crow Security | **Google Cybersecurity Certificate** – Coursera | **CCNA Networking** (David Bombal) – Udemy

EDUCATION

B.Tech in Cybersecurity

Sri Venkateswara College of Engineering, Tirupati

2022 – 2026

CGPA: 8.04
