

E Chandu Reddy

Hyderabad, India | [linkedin.com/in/chandureddy7](https://www.linkedin.com/in/chandureddy7) | github.com/chandureddy-sec | chandureddy-sec.github.io

Summary

SOC analyst (L1) with hands-on penetration testing lab experience in Active Directory, web and Android security. I triage EDR and SIEM alerts at work and build attack labs to understand what causes them. Looking for SOC analyst, VAPT associate or junior penetration tester roles in Hyderabad, open to relocation.

Skills

Security testing: Burp Suite, SQLMap, OWASP ZAP, Nmap, Nessus, Metasploit, BloodHound, Hashcat, John the Ripper, MobSF, JADX

Security operations: EDR and SIEM alert triage, log analysis, PowerShell and command-line investigation, incident escalation, ticket documentation, MITRE ATT&CK

Methods and networking: VAPT, PTES, OWASP Testing Guide, OWASP Top 10, CVSS, TCP/IP, DNS, DHCP, NAT, VLAN, routing, Wireshark

Programming and environments: Python, Bash, Scapy, Flask, Git, Kali Linux, Windows Server, Active Directory, Proxmox, VirtualBox, VMware

Experience

SOC Analyst (L1), Internship - GBB (Gowra Bits & Bytes) 2026 - Present

- Monitor and triage security alerts on EDR and SIEM platforms, and classify activity as benign, suspicious or malicious from log analysis.
- Investigate suspicious endpoint, PowerShell and command-line activity. Document each case in a ticket and escalate confirmed or undetermined incidents under the SOC procedure.
- Built the Android pentest lab listed under Projects, and am migrating ISO 27001 documentation into a GRC module.

Participant, Ethical Hacking Hackathon - Supraja Technologies 2025

- Ran live VAPT against web applications and network services under time pressure.
- Found price manipulation and broken authentication with Burp Suite and clear-text credentials with Wireshark, then delivered a report with risk ratings and fixes during the event.

Ethical Hacking and Penetration Testing Diploma - Craw Security, Hyderabad Completed 2026

- Six months of lab training: reconnaissance, scanning with Nmap and Nessus, exploitation, Linux administration, networking and report writing.

Projects

Active Directory Attack Lab

Built a Windows Server domain controller, Windows client and Kali attacker with deliberate weaknesses: roastable accounts, unconstrained delegation, GenericAll ACL abuse, a delegated GPO and an ADCS ESC1 template. Practised Kerberoasting, AS-REP roasting and DCSync, enumerated with BloodHound, and wrote a pentest report.

Web Application Pentest Lab

Assessed DVWA for SQL injection, cross-site scripting and broken authentication with Burp Suite, SQLMap and OWASP ZAP. Rated each finding with CVSS and gave a fix, in a client-report format following PTES and the OWASP Testing Guide.

Android Pentest Lab (built at GBB)

Connected an Android device or emulator to a Kali VM on Proxmox with ADB and a network tunnel. Ran static and dynamic APK analysis with MobSF, JADX and Burp Suite for insecure storage, exported components, hardcoded secrets, weak authentication and API flaws, and documented each finding with impact and remediation.

Footprinting and Recon Framework (in progress)

Python framework that automates passive OSINT and active network reconnaissance in one repeatable workflow.

Network Intrusion Detection Prototypes

Three Python experiments: a Flask and Scapy dashboard scoring packets with a Random Forest trained on KDD Cup 99, a Streamlit prototype with Gemini-written alert explanations, and a PyTorch LSTM-DQN agent. Code: github.com/chandureddy-sec, repository NTF-IDS.

Education

B.Tech in Cybersecurity - Sri Venkateswara College of Engineering, Tirupati. CGPA 8.04 2022 - 2026

Certifications

Craw Security: Ethical Hacking and Countermeasures (May 2026), In-Depth Advanced Networking (Jan 2026), Linux Essential Training (Nov 2025)

Other: Google Cybersecurity Certificate (Coursera), Introduction to Cybersecurity (Cisco), CCNA course (David Bombal)
