OBJECTIVE

Cybersecurity and Penetration Testing enthusiast with hands-on experience in Web Application Security Testing, Network Security Analysis, and Vulnerability Assessment. Skilled in tools such as Burp Suite, Nmap, Wireshark, SQLMap, and Kali Linux, with practical knowledge of OWASP Top 10 vulnerabilities, reconnaissance, and exploit validation. Passionate about Ethical Hacking and identifying real-world security vulnerabilities through practical testing and security analysis.

TECHNICAL SKILLS

Operating Systems	: Kali Linux, Windows
Networking	: TCP/IP, OSI Model, Subnetting, VLAN, NAT, DHCP, Routing
Web Security	: OWASP Top 10, Authentication Testing, Session Management
Security Tools	: Burp Suite, Wireshark, Nmap, SQLMap, Nessus, Metasploit, Hashcat /John The Ripper
Security Testing	: Web Application Pentesting, Vulnerability Assessment
Programming	: Python, Basic Bash Scripting
Concepts	: HTTP/HTTPS, Cookies, Headers, TLS/SSL, CVSS Basics

PRACTICAL EXPERIENCE

Ethical Hacking Hackathon – Supraja Technologies 2025

- Performed hands-on penetration testing on web applications and network services in a competitive lab environment.
- Intercepted and manipulated HTTP requests using Burp Suite to identify vulnerabilities including price manipulation attacks.
- Analyzed network traffic using Wireshark and identified insecure authentication mechanisms and clear-text credential exposure.

Cyber Security Diploma Training – Crow Security, Hyderabad Present

- Gained practical exposure to Linux administration, command-line operations, permissions management, and shell scripting.
- Learned networking concepts including TCP/IP, subnetting, routing fundamentals, and network protocols.
- Practicing ethical hacking methodologies including reconnaissance, vulnerability scanning, and web application security testing.

PROJECTS

Active Directory Attack Lab

- Designed and deployed a misconfigured Active Directory lab environment using Windows Server Domain Controller, Windows client, and Kali Linux.
- Simulated real-world enterprise attack scenarios including Kerberoasting, AS-REP Roasting, Pass-the-Hash, DCSync, and lateral movement.
- Performed network enumeration and privilege escalation using BloodHound to identify and exploit Active Directory misconfigurations.
- Achieved full domain compromise by exploiting weak service accounts, exposed credentials, and excessive privileges.

Web Application Penetration Testing Lab

- Performed security testing on intentionally vulnerable web applications to identify vulnerabilities including SQL Injection, XSS, Broken Authentication, and IDOR.
- Intercepted and modified HTTP requests using Burp Suite to analyze authentication mechanisms, session handling, and parameter tampering vulnerabilities.
- Conducted reconnaissance and vulnerability validation using tools such as Burp Suite, Nmap, SQLMap, and OWASP ZAP.
- Documented identified vulnerabilities with impact analysis and remediation recommendations following OWASP Top 10 guidelines.

CERTIFICATIONS

- Linux Essentials – Crow Security
- Google Cybersecurity Certificate – Coursera
- CCNA Networking Course by David Bombal – Udemy
- Ethical Hacking Training – Crow Security

EDUCATION

B.Tech in Cybersecurity

Sri Venkateswara College of Engineering, Tirupati
CGPA: 8.04

2022 – 2026
