Summary

SOC analyst (L1) with hands-on penetration testing lab experience in Active Directory, web and Android security. I triage EDR and SIEM alerts at work and build attack labs to understand what causes them. Looking for SOC analyst, VAPT associate or junior penetration tester roles in Hyderabad, open to relocation.

Experience

SOC Analyst (L1), Internship GBB (Gowra Bits & Bytes) 2026 to present

- Monitor and triage security alerts on EDR and SIEM platforms, and classify activity as benign, suspicious or malicious from log analysis.
- Investigate suspicious endpoint, PowerShell and command-line activity. Document each case in a ticket and escalate confirmed or undetermined incidents under the SOC procedure.
- Built the Android pentest lab described below, and am migrating ISO 27001 documentation into a GRC module.

Ethical Hacking Hackathon Supraja Technologies 2025

- Ran live VAPT against web applications and network services under time pressure.
- Found price manipulation and broken authentication with Burp Suite and clear-text credentials with Wireshark, then delivered a report with risk ratings and fixes during the event.

Ethical Hacking and Penetration Testing Diploma Crow Security, Hyderabad Completed 2026

- Six months of lab training: reconnaissance, scanning with Nmap and Nessus, exploitation, Linux administration, networking and report writing.

Projects

Active Directory Attack Lab Windows Server, Kali Linux

Built a domain with a Windows Server controller, a Windows client and a Kali attacker, with deliberate weaknesses: roastable accounts, unconstrained delegation, GenericAll ACL abuse, a delegated GPO and an ADCS ESC1 template. Practised attack paths such as Kerberoasting, AS-REP roasting and DCSync, enumerated with BloodHound, and wrote the results up as a pentest report.

Web Application Pentest Lab Burp Suite, SQLMap, OWASP ZAP

Assessed DVWA for SQL injection, cross-site scripting and broken authentication. Rated each finding with CVSS and gave a fix, in the format of a client report following PTES and the OWASP Testing Guide.

Android Pentest Lab (built at GBB) Kali, Proxmox, MobSF, JADX, Burp Suite

Connected an Android device or emulator to a Kali VM on Proxmox through ADB and a network tunnel. Ran static and dynamic APK analysis for insecure storage, exported components, hardcoded secrets, weak authentication and API flaws, and documented each finding with impact and remediation.

Footprinting and Recon Framework (in progress) Python

Automating passive OSINT and active network reconnaissance in one repeatable workflow.

Network Intrusion Detection Prototypes Python, Scapy, scikit-learn, PyTorch

Three experiments: a Flask and Scapy dashboard scoring packets with a Random Forest trained on KDD Cup 99, a Streamlit prototype with Gemini-written alert explanations, and a PyTorch LSTM-DQN agent. The README lists each limitation. Code: github.com/chandureddy-sec (NTF-IDS).

Skills

Testing	Burp Suite, SQLMap, OWASP ZAP, Nmap, Nessus, Metasploit, BloodHound, Hashcat, John the Ripper, MobSF, JADX
Detection and analysis	EDR and SIEM alert triage, log analysis, PowerShell and command-line investigation, Wireshark, MITRE ATT&CK
Methods and networking	PTES, OWASP Testing Guide, OWASP Top 10, CVSS. TCP/IP, DNS, DHCP, NAT, VLAN, routing, subnetting
Build and environment	Python, Bash, Scapy, Flask, Git, Kali Linux, Windows Server, Proxmox, VirtualBox, VMware

Education and certifications

B.Tech in Cybersecurity Sri Venkateswara College of Engineering, Tirupati. CGPA 8.04 2022 to 2026

Crow Security	Ethical Hacking and Countermeasures (May 2026), In-Depth Advanced Networking (Jan 2026), Linux Essential Training (Nov 2025)
Other	Google Cybersecurity Certificate (Coursera), Introduction to Cybersecurity (Cisco), CCNA networking course (David Bombal, Udemy)
